

Dear HR managers, thank you for your interest to me.

Below I included some words about me. I started to learn programming being at high school. Since 2004 I have been a part of one christian IT educational project. This changed my life. Along with this, I started to learn web development by myself. Being involved in that project, my students and I developed some web applications from simple one to complex sites with e-commerce integrated systems. Now I really want to learn how to work with big projects with complex data structures. I consider that every single person needs to permanently grow in knowledge, and this is the reason why I long to take part in your companies Internship, and may be to become an employee in the future.

EDWARD RUDOI

BACKEND JAVA DEVELOPER

STATEMENT

ASEM 1994 - 1999

Academy of Economic Studies, Chisinau, Moldova . University Degree majored in " Economy and Sociology", specialized in "Economy and Sociology of Human Resources "

PORTFOLIO

CANADIAN NUTRITION SYSTEM 2017

Me and my students were involved in developing site for Canadian Nutrition Association based on Yii2 framework. Our goal was to enlarge some functionalities that will help commercial agents to create their own labels by special standards approved by Canadian Nutrition Association (ex. <https://www.onlinelabels.com/label-generator-tools/Nutrition-Label-Generator.aspx>). We used vagrant, BitBucket and some other technologies for this project.

E-COMMERCE CONCEPT 2016-2017

This project the same my personal concept for E-commerce application based on Yii2 PHP framework. I got some ideas and design for Internet. My goal was to teach How to develop an e-commerce project from scratch until payment (I used sandbox for paypal to test that it's fully working app). Technologies used in this project - Yii2 framework for front and back parts of our site. Electronic generator of payment confirmation send by e-mail. Payment integration (developed by me paypal checking system) for easy electronic commerce. <http://sample.codeforlife.info/store/>

BOOKS STORE CONCEPT 2013-2015

This project - is my personal code and concept for Book Store. It's based on Yii1 frameworks. It was build for education skills for my students who needs to learn how to work with PHP frameworks. http://sample.codeforlife.info/books_store/

SERMONS MANAGER PLUGIN 2017

This is concept of WordPress plugin. Sermons plugin - should be a product for different religious organization to help them organizing all sermons and speakers by special criteria - topic, bible verses, date and some more other. This project needs some more customizations at front-end for good visualization and mobile version. I get concept and idea from Creatego. <http://sample.codeforlife.info/plugin/sermons-page/>

REAL ESTATE AGENCY

Real Estate project. I was involved like full-stack developer for customizations for this project. <http://univers-imobil.md/>
